About Me

Third-year Bachelor of Computing student at Belgium Campus who thrives on turning ideas into well-engineered code. Strong grounding in back-end OOP (C#, Java) and budding machine-learning skills, with side work in Java game-mod development. Built a C# quoting tool that cut Mikado's quote prep time by ~60%, and constantly refine personal productivity utilities (e.g. Zeltimer CLI time-logger). I'm looking for hands-on projects—anything from data science tasks to full-stack APIs—to deepen my skills and decide where to specialise. Long-term, I aim to architect and maintain my own open-source products.

Skills

Languages: C#, Java 17, JavaScript (ES6), SQL, Python

Frameworks: Windows Forms, Java Swing, JSP / Servlets, Express.js, EJS, Bootstrap

Tools: Git & GitHub, Visual Studio, NetBeans, VS Code, Apache Tomcat, Node.js + npm, Nodemon, Mongoose, Postman

Databases: PostgreSQL, SQL Server, SQLite, Apache Derby (JavaDB), MongoDB (replica & sharding)

Education

BComp Computer Science — Belgium Campus iTversity (2023-2026)

National Senior Certificate — Hoërskool Wonderboom (2018-2022)

Experience

Software Developer @ Freelance (2024-01–Present)

Develop bespoke software for small businesses. Highlights: C# quote-automation tool for Mikado (cut prep time by ~60 %), and the Ruisseaux baby-products website featuring product catalogue, pricing, and event gallery.

Projects

Quote-Maker Automation (Mikado) — 2025-07

Desktop tool that auto-generates customer quotes from a parts database, cutting prep time by ~60 % and eliminating manual calculation errors.

Ruisseaux Product & Events Website — 2024-11

Custom information site for a baby-products retailer—product catalogue with pricing, event gallery, and contact form. (Business has since closed; site offline.)

BC Student Wellness System - Milestone 1 (Web) — 2025-07

Login/registration web app demonstrating session management, password hashing, and input validation for student wellness services.
